Event

With the WA borders finally open we took the opportunity to visit Strandline's Coburn Mineral Sands Project. The overall impression is that Coburn is being exceptionally well managed, and the project is on track and on budget for first production in 4Q22. The mineral sands market remains very tight, and Coburn production is likely to be delivered into zircon and rutile pricing which is well above the DFS assumptions and our forecasts. Strandline remains our top pick amongst our emerging resource company coverage.

Highlights

- Coburn is now ~63% complete, and unlike some projects in WA that do not have fixed-priced contracts, Coburn remains on-budget and on-time. In fact, we got the impression from site management that they are quietly confident that the project will reach first production ahead of expectations.
- The only part of the construction process that has been a little slow has been the McMahon bulk earthworks and road construction but that is not on the critical path and will be completed shortly. We drove into site alongside the new 42km access road that is now largely complete.
- The critical path item is construction of the Wet Concentration Plant (WCP). Construction is now out-of-ground with steelworks and electrical cabling being installed. The spirals were pre-ordered and are on site waiting to be lifted into position. Around 30% of the pre-fabricated steel (from China) is on-site, with the rest complete and en-route to site.
- The supporting infrastructure is well advanced including roads, power and water. Power is being provided by a combination of LNG engines and solar. Water is being provided from on-site borefields.
- The Mineral Separation Plant (MSP) is also out-of-ground and although it is not on the critical path, construction is well advanced. Coburn will produce and sell Heavy Mineral Concentrate (HMC) while the MSP is being commissioned.
- The mining equipment (Dozer Mining Units) are expected to be delivered to site in June and the pre-strip will commence in June/July.
- The main village is now largely complete, with just cosmetic improvements required.
 Coburn has beds for around 270 people in the permanent and construction village, and there are around 250 personnel on site. We note with interest the high level of diversity with around one third female and 17% indigenous staff.
- The experience of the Strandline management team in managing construction projects and contractors is evident. CEO Luke Graham and ED Peter Watson are both ex-Sedgman, a global leader in construction of mineral processing plants now owned by CIMIC. Coburn is not experiencing the cost overruns and project delays which are impacting other projects in WA. We attribute this to the detailed work that has gone into the construction contracts prior to construction commencing, and the experience of the Strandline management team.
- With Coburn now just ~6mths away from first production, the stock is materially undervalued in a mineral sands market that continues to tighten due to lack of supply. Mineral Sands markets are relatively opaque, but we understand zircon pricing has pushed through US\$2,500/t in China and bulk rutile is selling for about US\$1,800t/t. These prices are materially above the assumptions in the Coburn DFS and our forecasts. We forecast EBITDA in FY23/24 of A\$102m/\$167m. Those numbers increase to A\$128m/\$215m in FY23/24 at spot commodity prices.

Recommendation

We retain our BUY recommendation and price target of A\$0.71ps. Coburn is a world class mineral sands development that is fully funded, under construction and mineral sands markets remain tight.

Strandline Resources Ltd. engages in the exploration and development of mineral properties. The company is developing the Coburn mineral sands project in Western Australia and has mineral sands interests in Tanzania at Fungoni, Tajiri and exploration assets. Coburn has qualified for a A\$150m funding package from the Northern Australia Infrastructure Facility (NAIF). Strandline released an updated DFS for Coburn in June 2020 which valued the project at A\$705m. Coburn will supply about 5% of global zircon and 10% of global chloride ilmenite demand when in operation, expected in mid 2022.

Key risks

- Strandline Resources is not currently in production and there are design, construction and start-up risks with the Coburn and Fungoni projects. These projects may cost more and may not operate as expected.
- Forecasting future commodity prices and operating costs has considerable uncertainty.
 Our forecasts may prove to be too optimistic on both. If mineral sands prices are weaker than forecast and/or Strandline Resources' costs are higher than we expect then our cash flow forecasts will be too high.

Core drivers and catalyst

- Zircon and rutile markets remain tight, and the pipeline of new projects to supply steady demand growth is limited. We expect prices to remain elevated whilst the market is in an incentive pricing environment.
- Coburn is a world class project with a reserve of 523Mt at 1.11% Total Heavy Mineral grade. It will produce approximately 230kt of Heavy Mineral Concentrate (HMC) per annum with an initial mine life of 22.5 years.
- Strandline also has a smaller, development ready project in Tanzania at Fungoni. Once developed, Fungoni should pave the way for the larger Tajiri project.
- We value the Coburn project at A\$540m (post-tax DCF at 10%). We note Strandline values the project at A\$705m (pre-tax DCF at 8%) for the first 22.5 years of the project, with potential to extend the mine-life by 15 years.

Rating Classification

Buy	Expected to outperform the overall market
Hold	Expected to perform in line with the overall market
Sell	Expected to underperform the overall market
Not Rated	Shaw has issued a factual note on the company but does not have a recommendation

Risk Rating

High	Higher risk than the overall market – investors should be aware this stock may be speculative
Medium	Risk broadly in line with the overall market
Low	Lower risk than the overall market

RISK STATEMENT: Where a company is designated as 'High' risk, this means that the analyst has determined that the risk profile for this company is significantly higher than for the market as a whole, and so may not suit all investors. Clients should make an assessment as to whether this stock and its potential price volatility is compatible with their financial objectives. Clients should discuss this stock with their Shaw adviser before making any investment decision.

Depending on the timing and size of your investment, your portfolio composition may differ to the model. Performance figures are derived from the inception date of the model and its investment transactions from that date, therefore the performance for your portfolio may be different. If you have any questions in connection with differences between your portfolio and the model, you should speak with your adviser.

IMPORTANT INFORMATION TO CONSIDER: It is important that before making a decision to invest in a Shaw Managed Accounts, a managed fund, an exchange traded fund, an individual hybrid security or listed debt instrument that you read the relevant Product Disclosure Statement ("PDS"). The PDS will contain information relevant to the specific product, including the returns, features, benefits and risks. The PDS can be found at: www.shawandpartners.com.au/media/1348/shawmanagedaccounts pds.pdf.

RISKS ASSOCIATED WITH HYBRID SECURITIES: Hybrid securities and listed debt instruments differ from investments in equities and cash products in a number of important respects. The liquidity risk associated with an investment in hybrid securities and listed debt instruments will generally be greater than that associated with equities. The credit risk associated with hybrid securities and listed debt instruments is higher than that of a cash product or term deposit. Some hybrid securities may be perpetual in nature, meaning that they can only be redeemed or exchanged for cash or equity at the issuer's option. Hybrids may also contain terms which automatically trigger the deferral of an interest payment or cause the issuer to repay the hybrid earlier or later than anticipated. ASIC has published information to assist consumers in understanding the risks and benefits associated with an investment in hybrid securities or listed debt instruments. This information can be found under the heading 'Complex Investments' at www.moneysmart.gov.au/investing.

DISCLOSURE: Shaw will charge commission in relation to client transactions in financial products and Shaw client advisers will receive a share of that commission. Shaw, its authorised representatives, its associates and their respective officers and employees may have earned previously or may in the future earn fees and commission from dealing in the Company's financial products. Shaw acted for the company in a corporate capacity within the past 12 months for which it received a fee.
